It is a valuable paper, but I have some suggestions:

- Please add information in the Abstract and Materials and Methods about the months when the samples were collected. Mention if you collected water samples every month of the cropping season of 2016, or just once.
- If you collected water samples every month of the cropping season of 2016, please add the results separately and do the correlations. The results can be influenced by the month of collection.
- Please add some information regarding the meteorological conditions from that period. It could be of great relevance to do some correlations between your results and meteorological conditions.
- Please update your references. The newest one is from 2014.....
