**Evaluation: MAJOR REVISION** 

Dear Editor, please send the research for evaluation again after modifications are corrected by the author

## **Comments**

The paper offers valuable contributions to the understanding of how emerging technologies can enhance urban safety and security. It effectively situates these advancements within the broader context of CPTED and smart city development. However, there is room for further exploration, particularly in terms of user engagement and the practical challenges of implementing these systems in diverse urban environments.

## Areas for Improvement

- Specificity in Case Studies: The paper could benefit from more detailed descriptions of the case studies, including specific outcomes and lessons learned.
- 2. **Quantitative Analysis**: While the qualitative approach is valuable, incorporating quantitative data could provide a more comprehensive understanding of the effectiveness of these technologies.
- 3. **User Perspectives**: Future research could place more emphasis on gathering and analyzing user perspectives, which would provide valuable insights into the public's reception and concerns regarding these technologies.
