**Potential competing interests:** No potential competing interests to declare.

The study has good potential as it compares several case studies of open source within the industrial perspective. This helps in understanding the characteristics of open software sources. However, this can be taken into consideration:

1. The list of open source requirements can be listed in the table in general forms.
2. The case studies of 4 groups or cases can also be compared in table form with clarity on their different approaches.
3. A current study that makes such comparisons can be highlighted as a benchmark with a success story.
4. Recommendations and limitations should be added. This will guide other researchers who wish to further expand on the study area.
