Potential competing interests: No potential competing interests to declare.

The topic is interesting, but there are several issues that need attention.

Here are my recommendations to improve the article.

Structure and Writing:

- The current structure and writing style do not align with the standards of an academic article. It is recommended to adhere to the typical structure used in academic papers.
- Introduce the research context, discuss the state of the art, and compare the work with previous studies (2018-2023).
- To enhance the coherence of the main text, consider relocating certain content to an appendix.
- Ensure the bibliography is meticulously updated and linked throughout the text.

Methodology:

- The paper lacks methodological rigor.
- Each decision made in the experimental study should be explained and justified.
- Strengthen the methodology section by incorporating citations from relevant works.

Results and Discussion:

- The results and discussions need a more solid foundation.
- Provide a detailed explanation of the findings, especially those related to the rejection of AR.
- Clarify whether the results are generalizable or specific to the studied case.
- Conduct a thorough comparison with existing literature to discuss how the findings diverge from or align with other works.
