

Review of: "Translational Mobility Medicine and Ugo Carraro: A Life of Significant Scientific Contributions Reviewed in Celebration"

Matthew Taylor

Potential competing interests: No potential competing interests to declare.

This article is a comprehensive overview of the scientific achievements of Professor Ugo Carraro to current time. It was inspiring to read about all of Professor Carraro's achievements across many sub-fields of medicine, and the article was well-written and structured by Barbara, Walter and Amber. It's great to hear how Professor Carraro has fostered collaborations with so many international teams, and especially encouraging how he mentors new researchers to achieve their best. The establishment of the EJTM and PMD conferences are just some examples of avenues where myology research can be communicated, discussed and debated amongst colleagues. I'm grateful for all the encouragement Ugo gave me in publishing some of my PhD findings on Functional Electrical Stimulation research. Congratulations on this milestone Ugo - 80 years young! Hope to meet in Italy someday soon. Best wishes, Dr Matthew Taylor, Australia.
