

# Review of: "A Potential Therapy for SARS-Cov-2 Virus Deactivation: Carbon Dioxide Management"

Leo Pruimboom

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The paper needs organisation; although it is short, headers would make it more readable. There could be more details about time and dose; CO<sub>2</sub> therapy, called therapeutic hypercapnia should be more emphasised with existing trials including hypercapnia in patients during lobectomy. When this would be added I would accept the paper and a hypothesis and not a review
