**Potential competing interests:** No potential competing interests to declare.

The authors have made a great effort in summarising a really complex issue in a few lines, and the result is great. The letter is, apart from short, really cohesive and informative, so congratulations.

As a possible improvement, I would have introduced the functions of ER in cell physiology and defined the concept of ER stress. Perhaps this information was skipped intentionally in an attempt to summarise the work as much as possible, but it would have been helpful for those who are not familiarised with this research topic. Moreover, I feel that the conclusion ('Elucidating the molecular events and...') should form a separate paragraph.
