

# Review of: "The Role of Platelet Rich Plasma Injections in Cases of Stress Incontinence"

Santiago Palacios

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

It is an article that can be accepted for publication with minor review. It is well developed and frankly novel. My observations are:

- 1.- In the Abstract, the statistical results of the study should be mentioned. This would entice for it to be a full read.
- 2.- In the Discussion, I would like the possible action mechanism of PRP on stress urinary incontinence to be discussed in more detail.
- 3.- Finally, in the Discussion, the author should be more critical of his own study. In the Discussion, the weaknesses should be mentioned and pointed out, among others, the low number of patients in the study, and that there is no control group.
