Potential competing interests: No potential competing interests to declare.

Suggestion and Recommendation:

The authors present a technical research paper with a relevant topic, proper research methodology, and a potentially good contribution to the field of studies.

The authors are encouraged to resubmit the paper with more clarity on the presented performance assessment metrics, selected relevant case studies, and possible application scenarios with assessment metrics. The paper should be written in the proper format, figures should fit within the text, the use of font should be uniform throughout the paper, and references should be updated with the most recent results.

More references need to be added that support/justify the concept behind this work.
