Potential competing interests: No potential competing interests to declare.

This manuscript addresses an important subject and delivers notable results concerning the role of energy efficiency and integration in district heating systems. The work is interesting; however, refining its clarity, providing more context, and supporting it with additional quantitative data would greatly improve both its impact and ease of comprehension.

1. Rewrite the abstract, showing results, objectives, and the scope of your research.
2. Define PP and CHP used in Figure 1.
3. Page 9 in Table 4; Increase in district heating up to 30 of total heat demand. Here, 30% should be written.
