Potential competing interests: No potential competing interests to declare.

The revised paper can be published in the Qeios. However, some issues need to be updated to improve the manuscript as follows:

1. Abstract: This section is quite good but needs more research findings. Please kindly update.

2. Introduction:

- This section should be shorter, causing be tired of reading. Please address new research gaps and then emphasize why the authors do this study. Please consider rewriting it more concisely by moving some background content to the literature review section.

3. Literature review

- Please consider providing a thorough literature review regarding advanced technology applications in education, and the need for a cloud computing paradigm in academics.

- Please consider dividing this section into subsections providing topic-related analysis as mentioned above.

4. Validation and discussion

- Please consider providing a new subsection to validate the proposed model.

- The result analysis could be better due to a lack of thorough discussion. Please rewrite it and consider providing a new discussion section to provide significant criticism and research limitations.

5. Conclusion:

- The conclusion would be improved if the authors provided research limitations and emphasized future work. Please update.

6. References:

- Some references are too old (over ten years). Please replace the new ISI articles to improve this section.
