Dear,

Muhamad Hanif Rawi's manuscript, titled "Exploring the Significance and Medicinal Potential of *Rubus fraxinifolius*: A Review of Ragimot Wildberry", is of interest to the scientific community.

I would first like to congratulate you on the article, but I would like to make some observations to improve it.

Overall, the article needs improvements, mainly because the text is very shallow. The text is redundant, with many statements being repeated throughout it.

The title is not appropriate because nothing was explored but rather a literature analysis was carried out.

The Abstract must be adjusted; it has an extensive theoretical introduction. I believe the goal is confusing because it cannot be achieved with work, and a discussion of what was presented in the work must be included in depth.

The introduction must bring the objective of the research to the end. The introduction brings many characteristics of the fruit; I think this could come in a separate section.

In nutritional composition, write about how the cited references arrived at the mentioned results.

Functional properties: Provide more information about the included studies, especially the type of study.

I believe that research that applied *Rubus fraxinifolius* for purposes mentioned throughout the work should be included, perhaps in the production of active packaging, supplements, preservatives, etc.

The conclusion is appropriate.

Yours sincerely!
