Potential competing interests: No potential competing interests to declare.

The paper explores the impact of Analytical Study and Amelioration of Plastic Pavement Material Quality. The experimental design is satisfactory, and the writing quality is adequate. Nevertheless, there are a few issues that require attention:

1. It is necessary to specify Figure 10.
2. In the titles of Figures 9, 10, and 12, the nature of the samples studied must be added.
3. Some highly relevant studies must be added as references.
4. A comparison with previously published results of similar materials should be discussed and summarized in a Table.
5. The abstract is too long and needs rewriting. According to journal regulations, the abstract must be entirely rewritten using actual results.
