The article shows the importance of think tanks in magatrends analysis. The authors describe seven think tanks from different countries and regions of the world, which apply different strategies of knowledge dissemination and policy advice. The work is very interesting because it fits into contemporary issues of globalisation. This article fills a gap in the academic literature by analysing the evolution of megatrends and future research. Think tanks fit into the triad of developing economies and science: megatrends, future research, and strategic foresight. According to the Oxford Languages dictionary, 'a think tank devoted to the study of political and economic integration'. The authors show, in the literature section of the paper, what the role of think tanks is. And although the role seems to be obvious in terms of economic and social development, the part of the work in which the authors present the evolution of think tanks is very interesting. In my opinion, researchers may have already forgotten about think tanks, and this form of reminder, allows them and me to complete our knowledge of think tanks.

The authors share their reflections on a variety of think tanks. It may seem to the reader that the choice of think tanks is random, but this is not true. When the reader begins to study the think tanks used by the authors in the paper, he or she is led to believe that they are related to each other. All, included in the paper, think tanks are linked by the global economy and responsibility for it.
