Potential competing interests: No potential competing interests to declare.

The present manuscript deals with the traditional plant Pterocarpus marsuipum.

The species name should be written in small letters.

Recommended

 The genus Pterocarpus is a large deciduous tree species of the angiosperms group (flower) from the Leguminosae family.

Enter a space between 'the' and 'Leguminosae.'

2. Justify this paragraph:

Earlier phytochemical investigation reports revealed that P. marsupium Roxb contains alkaloids, proteins, carbohydrates, coumarins, gums, mucilage, fixed oils, anthraquinone glycosides, saponin glycosides, tannins, flavonoids, and phenolic compounds [10]. It is a rich source of terpenoids, which includes aurone, isoflavonoid glycosides, and associated phenolic compounds such as lupenol, epicatechin, and β-sitosterol [11]. The leaves possess anthelmintic and antioxidant activities. The stem possesses antioxidant, antidiabetic, anti-inflammatory, and antibacterial activities. The bark possesses anti[1]inflammatory, analgesic, anticancer, antimicrobial, hepatoprotective, and antidiabetic activities. The heartwood possesses antidiarrhoeal and antidiabetic activity.

The same problem exists throughout the whole manuscript.

3. Table 2. Phytoconstituents from different parts of P. marsupium Roxb

Enter a space between 'P.' and 'marsupium.'

4. If you use brackets for giving references, this citation should be avoided.
