Great effort in writing the manuscript. The following are some things to improve:

1. abstract; provide some information related to participants, highlight important findings from your study. Highlight essence of your study rather than providing background to the study.
2. what are some issues related to the learning management system?
3. what are some notable results from past studies related to application of LMS in their teaching and learning?
4. are all population can experience benefits from using LMS?
5. suggest to have more citations and references throughout your manuscript.
6. what are the current academic gap in this area? what about future studies? what can be improve?

Important work indeed, thank you.
