Bushen Culuan Decoction

National Cancer Institute

Source

National Cancer Institute. *Bushen Culuan Decoction*. NCI Thesaurus. Code C160712.

A traditional Chinese medicine (TCM) decoction containing a mixture of ten Chinese herbs including Tusizi, Yinyanghuo, Xianmao, Xuduan, Gouqizi, Nvzhenzi, Zelan, Shengpuhuang, Xiangfu and Chuanshanlong, with potential to induce ovulation. Upon oral administration, Bushen Culuan decoction may, through a not yet fully elucidated mechanism, depress follicle-stimulating hormone (FSH) levels, elevate anti-Mullerian hormone (AMH) levels, and increase the number of antral follicle counts (AFCs), thereby promoting ovulation.
