Thank you for giving me the opportunity to review this paper.

I am pleased to see that the authors did lots of work in this paper belongs to food consumption preferences during COVID-19 but there are some lacking in the paper as before consumption there is also a need to discuss about the consumer buying behaviour and consumer safety pattern during COVID-19. So authors need to do some minor corrections by adding some contents with the genuine references about the consumer buying behaviour and consumer safety pattern during COVID-19. Author need to add references of Sehgal et al., 2021, Khanna et al., 2022 and many more previous researches belongs.

In the Methodology Section author needs to clarify the expression as it is difficult to understand this section as a whole.

Theoretical/Practical implications section also need to be specific and clear as it is not clearly explained.
