Potential competing interests: No potential competing interests to declare.

Despite the prospective nature of this field's study and the need for new investigations, the current corpus of information is lacking in the following critical areas:

- An accurate presentation of the procedures and outcomes is required in the conclusion.
- It is prudent to emphasize the article's distinguishing features in the summary.
- It is advised that the references be updated and that at least five recent ones from the last few years be reviewed.
- Knowledge of measurement equipment and their constituent elements is required for the technique.
- The outcomes must be validated using software.
- The position of the temperature control apparatus should be described in detail on the plan.
- Some facts stressing the relevance of the inquiry should be provided in the conclusion, in addition to other information gleaned from the study.
