The paper focuses on the issues of spatial-temporal diversification in agriculture. The authors highlighted economic and environmental links in diversification processes with a case study of India. The manuscript contributes to the analysis of regional agricultural development in India through the presented spatial-temporal analysis of crop changes for the period of 1995 to 2015. The authors used Gibbs-Martin's technique to calculate the diversification index, which can be used as an example of data analysis in environmental studies and agricultural monitoring. I endorse the paper.

With kind regards, - Polina Lemenkova.
