Potential competing interests: No potential competing interests to declare.

certain points the author should clarify before publishing

1. ethical approval and clinical trial registration is not mentioned
2. study design as mentioned in the methodology is prospective observational study, all measurements were just made at one point and none of the study participants were followed for a period of time? nothing is mentioned in this regard.
3. periodontitis diagnosis is not made using the latest AAP-EFP 2017 classification. why?
4. how many sites per tooth were probed for clinical measurements were not mentioned.
5. the authors have not use analysis to study the effect of confounding factors like-diabetes mellitus, smoking etc on periodontitis. yet the authors concluded periodontitis as an independent predictor for MINOCA without eliminating role of confounders.
