This is a very thorough and good study with some interesting results. I have commented on some minor changes/suggestions in the attached (supplementary) file.

Overall the writing could benefit from being a bit more succinct in places, with some of the text in the results belonging in the methods or in the discussion or is not necessary. Some of the text could be made clearer, with a few areas (especially in results) hard to follow due to the abbreviations (see attached).

The discussion is thorough but there are too many values/results included that should be in the results section.

The suggestions are minor though and I don't think would take long to alter if taken on board.
