

Review of: "Challenges of Educational Support for Students with Disabilities during Covid-19 Pandemic"

Nureyzwan Sabani

Potential competing interests: No potential competing interests to declare.

According to the research method that I read, the participants in this study were parents and special education teachers.

How did the author determine the participants from these countries?

Why did the author carry out data collection techniques only by conducting interviews?

Based on the results of the research, I did not find any solutions from teachers or schools in facing the challenges of educational assistance for students with disabilities.

In my opinion, this article really deserves to be published. However, the author needs to conduct interviews with teachers, schools, or parents of students regarding the solutions they face in accompanying students with disabilities when participating in distance learning. So that the results of this study can be used as a view and guide for teachers, schools or parents in facing the same obstacles.
