Review of: "Scaling up Food Processing in India by Tapping Houesholds' Potential"

Neena Bhaitia¹

1. Lady Irwin College, University of Delhi, India

It is a very well-written paper and covers an important aspect of making healthy, wholesome food available through engaging household food production units. A few suggestions to further enhance the paper are listed below:

1. Can you elaborate on the types of training programs (for example, on mass food production, food safety, etc.) that could be beneficial for household food producers in India?
2. Add specific evidence or studies on the microbiome.
3. What specific examples or case studies can you provide to illustrate successful implementation of household food processing models?
