The manuscript is very important and prepared in logical way and coherently. The following comments may improve the manuscript

1. Better to rewrite the abstract , the first paragraph of the abstract you write; should be taken to the introduction part
2. The study area is not indicated in the abstract others like objectives, methods, findings, conclusion and recommendations should be also checked
3. The Study Area in 2.1 is better to be located in map
4. I did not see the research methods used and the number of samples taken in methodology part
5. The discussion seems small comparing the results of the manuscript and better to compare and contrast with other studies in Asia and Africa
6. I found the recommendations are specific and useful however they are very detailed therefore it is better to regroup them
