Potential competing interests: No potential competing interests to declare.

The concept of the interaction between mind and matter is an intriguing psychological study that will continue to be of interest and explored by the scientific community, especially with the rapid development of global technology. This research provides depth and breadth in examining the relationship between psychological behavior constructs and physical systems, with a focus on exploring the connection between mind and matter in the context of online gaming. The strengths of the article can be found in: 1) The author's presentation of the issue supported by a comprehensive literature review in the background, 2) A sufficiently large number of participants covering a wide geographical area, 3) A rigorous and detailed methodology, and 4) Clear presentation of the research findings, which can serve as a reference for further similar studies.

As a suggestion to enhance the completeness of the article presentation, the author may consider the following: 1) Enriching the discussion with relevant previous research findings on this issue as a comparison to the current study, 2) Specifically presenting a conclusion and researchers' recommendations, and 3) Clearly stating the theoretical and practical implications of the findings that can be referenced by stakeholders interested in the results of this research. In conclusion, I commend the author for conducting an interesting study that has the potential to become a reference in the fields of psychology, behavior, education, and the application of technology.
