Potential competing interests: The author(s) declared that no potential competing interests exist.

The authors propose a case report on Pott's Puffy Tumor; even if other similar reports exists in literature, it remains a rare condition. Consequently, I think it could be worth publication.

However, I propose some comments:

- The text must be fully revised by a native English speaker to improve readability. In particular, I suggest shortening the sentences.
- The patient underwent an external frontal approach. In the discussion, the authors correctly report that an endoscopic approach is possible and suggested evaluating the sinus drainage. Why wasn't it done?
- If possible, it will be of great interest to have some intraoperative pictures.
