**Potential competing interests:** No potential competing interests to declare.

The manuscript addresses a very pertinent research question, pertaining to the role of socio-demographic determinants in dengue fever diagnosis and treatment.

## **A few points for the authors:**

1. The methodology for the data analysis is not specific and does not follow a clear thread.
2. Additionally, the authors start listing limitations in the methodology section. This should be consolidated and stated in the discussion section.
3. P values are not stated in the comparative quantitative analysis.
4. The authors are explaining their findings in the results section. This should be reserved for the discussion section.
5. The authors need to declare if they used AI tools in the writing of the manuscript.
