Potential competing interests: No potential competing interests to declare.

1. Make an effort to clarify and enhance your abstract.
2. On page 6, you might post the link where you get the DATA.
3. I couldn't locate anywhere in the text why this study is being conducted, whether it's based on facts or just fiction. Why did you decide to study soy?
4. As soon as you finish the equation, you should begin the explanation with Where: Maintain coherence.
5. There are several overlapping numbers in Figure 2.
6. Figure and table titles don't have to be bolded, unless a journal suggestion is involved.
7. Occasionally, the font size of the headings of figures and tables should be smaller than that of the text body.
8. The text body's font needs to match the page number.
9. It is necessary to eliminate the opening paragraph of the findings and replace it with pertinent data.
10. Provide clarity in your conclusion. Which soil, which legume, and which Kc are superior?
11. Were these findings previously undiscovered?
