Manuscript: Investigating Quality of Life in Mental Health Professionals and the Role of Social Support and Spiritual Needs: A Cross-Sectional Study in Greece

Dear Editor,

Thank you for considering me as a reviewer for the above manuscript submitted to your prestigious journal. It was an interesting study for me. The above manuscript was carefully reviewed, and there are some comments for the authors to improve their work.

1. Some information was missed in the methods section:
 - a. Please calculate a minimum sample size for the study.
 - b. Declare the sampling method for selecting the participants.
 - c. Please write the full term of PZ in the methods section.
2. It is better to analyze the variables with a continuous mode instead of a category. For example, in Table 10, there is an increasing trend in monthly income with QoL.
3. In Table 10, the QoL score was missed.
4. What is the difference between the results of Table 7 and Table 8?

Best, Shahab
