

# Review of: "Synthesis and Antibacterial Screening of Cefradine Schiff Bases and Their Metal Salts"

Hussein Ali Kadhim Kyhoiesh

Potential competing interests: No potential competing interests to declare.

1. What is the novelty and significance of the research?
2. Make sure all abbreviations are written out in full the first time they are used. This is particularly important in the abstract and the conclusions, but work through the entire manuscript carefully from this perspective.
3. In the current state, there are some typographical errors. Therefore, the authors are advised to recheck the whole manuscript to improve the language and structure carefully.
4. The structure of the paper needs some revision.
5. The logic of the work is not clear.
6. The results must be compared with data on other compounds reported in the literature; otherwise, it is difficult to judge the actual impact/improvement beyond the state of the art of the present approach.
