FDA-defined tobacco product

Addiction Ontology

Source

[Addiction Ontology](#)

Definition: A product that is designed in most cases for the purpose of ingestion of one or more constituents of tobacco, not including products that have a medicinal licence.

Curator note: This class is required because it is used by US the Food and Drug Administration's Center for Tobacco Products to classify products over which it has jurisdiction.

This definition was imported from the Addiction Ontology (see <https://addictovocab.org/>). Comments and suggestions for improvements are welcome using the Qeios comment system.

Definitions imported from the Addiction Ontology (AddictO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.

Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.

Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.

Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.
