Here, the authors have submitted a review article about the uses of AI in virology and its effectiveness in healthcare. The article is overall good. Here are some comments which the authors may consider-

1. I suggest the authors add some statistical or other means of data related to the topic. For example, authors can consider citing some relevant published work and adding their conceptual figures and data graphs to demonstrate advantageous outcomes.
2. The authors can make some qualitative and quantitative comparisons with conventional methods and AI-assisted technologies and summarize them in the manuscript.
3. Adding a table about comparative advantages could enhance the quality of the manuscript.
4. The authors may emphasize more the effectiveness and importance of AI in virology and healthcare in the abstract section.
