

Review of: "Neurotherapeutic Comparison of Aripiprazole and Ethanolic Extract of *Fragaria Ananassa* on Cerebrum and Amygdala of Methamphetamine Intoxicated Male Wistar Rats"

Subhash R. Yende

Potential competing interests: No potential competing interests to declare.

The hypothesis of the manuscript was good, but the execution of the study is not adequate. The rationale of the study is not clear. The introduction is incomplete and needs more experimental justifications to prove the hypothesis.

The animal ethical approval number is missing, and the extraction methodology is not mentioned. Further, data on histopathology is missing.

Overall, no recommendation for publication.
