Interesting and important subject!

The quality of the short paper could be developed by presenting the literature review methodology (e.g., systematic or integrative).

When discussing the digital transformation of public libraries around the world, adding more recent literature on North America and Europe. The latest references for these are 2011, 2016. Even these geographical areas are not on the focus of the paper, they could be handled systematically in line with other areas, e.g. Asia and South America, which are discussed with more recent literature including the challenges and opportunities of the digital transformation. The challenges and opportunities may be different in North America and Europe currently, but the same problems may be encountered in Bangladesh as well in the future. Thus, they may add value.

Challenges and opportunities of digital transformation in Bangladesh are presented. There is little repetition, specifically with challenges.

The author should add a concluding section, which could contain the contents of the last three paragraphs, limitations of the study, and the suggested future research opportunities.
