This manuscript requires revisions before it is ready for the publication.

Specific comments that need revisions:

1. Figures are from other sources and will require permission to be published and permissions should be listed.
2. Several figures are fuzzy and suboptimal. Please make the corrections
3. Figure 1. Requires better examples and better quality imaging.
4. The references should be numbered and the reference numbers should be added in the appropriate locations in the text.
5. In the conclusions the authors should mention what AI tools are already available and for what purposes and what does the future hold. They should also mention what are the strengths and what are the weaknesses of AI applications in education. Here are some specific questions that the authors should address : Which field will benefit the most? What are current obstacles to implementation of AI in education? What is available at the present time in learning about certain topics and procedures? How far have we progressed in application of AI in robotic driven procedures? What is the role of AI in proctoring and credentialing for certain procedures?
