# Briciclib

National Cancer Institute

## Source

National Cancer Institute. *Briciclib*. NCI Thesaurus. Code C141431.

A benzyl styryl sulfone analog, and a phosphate ester prodrug of ON 013100, with potential antineoplastic activity. Upon hydrolysis, briciclib is converted to ON 013100, which blocks cyclin D mRNA translation and decreases protein expression of cyclin D. This may induce cell cycle arrest and apoptosis in cancer cells overexpressing cyclin D and eventually decrease tumor cell proliferation. Cyclin D, a member of the cyclin family of cell cycle regulators, plays a key role in cell cycle division and is often overexpressed in a variety of hematologic and solid tumors and is correlated with poor prognosis. suppresses cyclin D1 accumulation in cancer cells.
