Potential competing interests: No potential competing interests to declare.

Well-written systematic review, I read the latest revised version (14.08.24).

First of all, it would have been better to broaden the keywords when searching for articles for this review (e.g., rational antibiotic use).

Secondly, I think it would be more valuable if it were stated in at least one paragraph how the action plan for this review after 2017 has gone and what changes have taken place.
