Potential competing interests: No potential competing interests to declare.

1. The language grammar needs to be optimized thoroughly. The wording of the whole abstract section should be more academic (from the second sentence to the end). The seventh paragraph of the introduction section should be divided into several shorter descriptions. Some “use” words may be changed to “usage” for more academic description.
2. Fig. 1. Education levels should be formal and universal. I would suggest primary, junior high, senior high, college, etc. In the Vocation column, students are also unemployed types. The unemployed type may include student data. And I would suggest plotting bar charts for the 4 categories separately. This table format is fine but not clear enough.
3. Plot bar charts for Table 2 for every question and its corresponding percentage.
4. Add further discussion for each question regarding the corresponding age, vocation, education, and marital status.
