**Potential competing interests:** No potential competing interests to declare.

This paper addresses a significant real-world problem encountered in many cities and buildings, making a valuable contribution to the field. Overall, the paper is well-written and easy to follow. However, there are some issues that need attention:

First of all, the paper is fully experimental, and a prototype is presented but is not implemented and examined in a real case. Moreover, the contribution to problem formulation is insufficient.

Secondly, the abbreviations such as RFID, etc., should be clarified in the first mention.

Thirdly, figure 2 and figures 8-10, 15-20 suffer from poor image quality. It is advised to improve the quality of these images for better clarity and understanding.

Fourth, there is no system validation and verification.

Finally, the conclusion should contain the results of implementation.
