Self-efficacy belief for a behaviour and its associated outcomes

Behaviour Change Intervention Ontology (BCIO)

Source

Behaviour Change Intervention Ontology (BCIO)

Definition: A belief about one's capabilities to organise and execute a behaviour and achieve the outcomes associated with this behaviour.

Comment: The phrase 'to organise' refers to the ability to organise mental processes and sequences of actions. 'self-efficacy belief for a behaviour' is part of 'self-efficacy belief for a behaviour and its associated outcomes'. However, the latter also includes a belief about the outcomes associated with behaviour.

This definition was imported from the Behaviour Change Intervention Ontology (see <https://bciosearch.org/>). Comments and suggestions for improvements are welcome using the Qeios review system.

Definitions imported from the Behaviour Change Intervention Ontology (BCIO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.

Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.

Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.

Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.
