Reducing non-revenue water in Luxor, Egypt, using GIS

This article aims to reduce losses in the water rate in Luxor city, Egypt, by fixing the expected leaks in the water system. The title matches the content. I recommend the publication of the manuscript after the following improvements are done.

1. Keywords should be in alphabetical order. (Page 2)
2. Introduction is brief and does not provide the necessary background information. This section should be enriched with more citations. (Pages 2 & 3)
3. Figure 2 should be located close to where it has been cited. (Page 4)
4. The described figure on page 5 (2nd line from bottom) is Figure 3, and by mistake, it has been written (Fig 4).
5. Figure 5 has not been cited in the text.
6. Tables 1 to 4 should be cited in the text in a proper way by adding the table number.
