Potential competing interests: No potential competing interests to declare.

The author(s) pointed out a significant topic for both relevant literature and industry. However, the paper's structure and scientific content are not suitable for a scientific journal. As indicated below, but not limited to, some parts of the paper lack technical content and structure. Therefore, unfortunately, I do not recommend publication.

1. The novelty of the study is not clear.
2. The previous literature has not been sufficiently reviewed.
3. The methodology has not been clearly given.
4. Authors always have to write a paragraph saying: "The rest of the paper is organised as follows. Section 2 contains the literature review. Section 3 contains the methodology (method). Section 4 contains the results. Section 5 contains the conclusions and policy implications," so the reader knows what's coming next.
5. The conclusion section is too simple.
6. The citations are too few.
