We have reviewed the paper "Results in cone metric spaces and related fixed point theorems for contractive type mappings" and offer the following comments:

Comments to the authors:

In this paper, the authors established some fixed point results for contractive type mappings in cone metric spaces. In my opinion, the paper should be considered for publication in the journal after major revision; the main problems are as follows:

1. Abstract needs rewriting; too rough.
2. The introduction, particularly the history of development, is not detailed enough; please rewrite.
3. Whether Theorem 4.3 and Theorem 4.4 can add corresponding examples to illustrate the accuracy of the proved results.
4. Please unify the reference format.
5. Please refer to the latest articles for writing.
