Dear Author(s),

Your manuscript is informative and useful, but:

1- The title does not properly include the main text. The main text talks about unfavorable hospital discharge, but the title indicates the hospitalization outcomes for cases of anemia in pregnant women.

2- The importance of those main blood abnormalities, as major causes of anemia, mentioned in the background, would be more appropriately discussed in the background and discussion sections.

3- Items of participants and characteristics of the study population in the results section should be transferred to the method section.
