

## Definition

# Participant engagement with intervention

### Behaviour Change Intervention Ontology (BCIO)

**Definition:** An individual human activity of an intervention participant within one or more parts of the intervention.

**Informal definition:** The extent to which someone interacts with an intervention, including their cognitive, emotional and behavioural response (e.g., attending intervention session) to the intervention itself.

*This definition was imported from the Behaviour Change Intervention Ontology (see <https://bciosearch.org/>).  
Comments and suggestions for improvements are welcome using the Qeios review system.*

*Definitions imported from the Behaviour Change Intervention Ontology (BCIO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.*

*Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.*

*Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.*

*Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.*
