This article presents a practical issue of our daily life. This project developed a mobile applications for the passengers to inform about bus arrival time using GPS to avoid long waiting time and uncertainty. However, it is more likely as a project work rather than research. In this article there is no discussion about the existing solutions. In addition there is no performance evolution of the developed solution : for example how accurately the developed application can track ? What is the cost of the developed application? What is the limitations?
