

Review of: "A Research Note on Natural Reclamation Processes that Support Mangrove Biodiversity Spheres: Sedimentation in Three Major River Deltas in Northwestern Luzon Using Aerial Imagery"

Rinaldi Imanuddin

Potential competing interests: No potential competing interests to declare.

Page 2. I think Figure 1 is not very clear, it is better to make an inset at each research location so that it will look clearer. Then the data source used by SRTM with what resolution or scale? please write too.

Page 14. several references have not been included, namely Canilao (2023) and the National Mapping and Resources Information Agency 711 series topographic maps (1979). Then for Newson in the contents of the article it says 2011, while in the references it says 2009. Please check again.

To improve the quality of article, some suggestions from me are as follows:

1. The objectives of this paper is to be clearer and stated in a straightforward manner.
2. The method is made to be more detailed, although it doesn't have to be too detailed, but not too global either.
3. The scientific basis for selecting the satellite imagery used is explained in this paper, as well as the basis for determining the year for the satellite imagery.
4. Please adjust the size of the pictures for a more comfortable viewing.
