

Review of: "Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study"

P. A. Kazerooni

Potential competing interests: No potential competing interests to declare.

I am truly honored to serve as a reviewer for the article "Prevalence of Buruli Ulcer among Residents in Jasikan Municipality ". The subject of study is highly beneficial for identifying health issues within your region. The introduction is comprehensive and informative. The sampling method aligns well with the study's objectives. However, it is essential to furnish readers with adequate details regarding the total population, the number of communities, inclusion and exclusion criteria, and the quantity of individuals interviewed.

Recommendations for public health include the enhancement of the surveillance system for early diagnosis and treatment. This necessitates educational initiatives for both health workers and the general population across various communities.

Best regards,

Parvin Afsar Kazerooni MD.MPH
