

Review of: "The Role of Plant Growth-Promoting Bacteria (PGPB) in Soil Fertility Restoration in Chemical-Contaminated Areas"

Choy Yuen Khew

Potential competing interests: No potential competing interests to declare.

- (1) It is recommended that the author include a list of previously reported PGPB that have demonstrated soil fertility enhancement.
- (2) Sections 2.2, 2.3, and 2.4 require further elaboration and description.
- (3) It is advised that the author address the challenges associated with the registration and commercialization of PGPB.
- (4) The manuscript requires additional comprehensive information before it can be accepted.
